VIGTHORIA WORKBENCH

Useful AI.
Your data policy.

Practical support for public-sector and regulated teams

Customer guide · 4 November 2026

Read confidential documents, check a budget and find incomplete records. In the private workspace, selected sources, private questions and answers are processed on the client device.

PRIVATE WORKSPACE

Selected files

Private questions and answers

Calculation and review

Approved local saving

ONLINE PLANNING

General task selection

Account authentication

Reusable working method

No confidential source needed

Vigthoria helps your team organise its work. Your organisation sets the permitted data, users, devices and save locations. This guide follows three fictional examples shown in the accompanying English and German Windows demonstration videos.

Demonstration: evaluation build 2.3.2-preview.2. Deployment uses the exact package approved by your IT.

01 One clear working method

Start with a general task, then work with confidential contents inside the private workspace. The online planning step does not need the confidential document.

Step	What your team does
1	Select a general task and review the proposed workflow. Account authentication and the selected task are used online.
2	Open the private workspace. Select only the approved local source needed for this task.
3	Check a calculation, find a missing value or ask a focused question about the exact source excerpt. Processing takes place on the device.
4	Compare the result with the source. A responsible person reviews and decides what happens next.
5	If needed, save deliberately to an approved local folder. Clear the workspace and close it when finished.

Privacy scope

These local-processing statements apply to the private workspace demonstrated here. The general Assistant and connected online tools have their own sharing behaviour. Your organisation approves which features staff may use for each data category.

02 Three tasks. Concrete results.

Fictional scenario	Result to check
Library budget	A local table contains 40,000.10 + 8,000.20 − 0.30 EUR. Exact total: 48,000.00 EUR. With a 45,000.00 EUR review limit, the difference is 3,000.00 EUR above the limit.
Register completeness	Three entries are checked for a required status. DEMO-002 has no status. The result identifies source row 3 for follow-up.
Project memo	The fictional memo names Dr Lena Weiss as coordinator and 12 November 2026 as the meeting date. Ask about both facts in English or German, then compare the answer with the visible source excerpt.

A useful draft, with human review

Document answers support staff in reading and drafting. Check names, dates, numbers and missing information against the selected source before using the answer. Workbench does not make an administrative or financial decision on behalf of the organisation.

The accompanying videos show the real Windows interface and genuine processing results. Clearly marked held views give time for explanation. All demonstration files are fictional.

03 Prepare your Windows workplace

Responsibility	Preparation
Your IT team	Approve the application version, device requirements and local AI capability. Install the complete package with its required Windows components, then test on the actual managed device profile.
Policy owners	Define permitted document categories, authorised users and review responsibilities. Agree approved local save locations and retention rules.
Staff	Use the private workspace for the approved confidential tasks. Check the source excerpt and the answer. Save only where policy permits.
Vigthoria	Work with your team to define pilot tasks, demonstrate the workflow and review the agreed acceptance cases.

Fit the tool to your policy

Use managed devices and the organisation’s endpoint protection. Choose an approved local folder for exports; a synchronised folder follows its own sharing policy. Normal workspace clearing removes visible working state. Deliberately saved files remain under your retention rules.

The current pilot uses approved text extracts (TXT/Markdown) and table extracts (CSV/TSV) in UTF-8 format. Installation and updates can require a network connection. Once approved local support is prepared, reviewed offline workflows and private document answers can run without online planning.

04 Make the pilot measurable

Begin with one team, a managed Windows device profile and a small set of approved tasks. Test using fictional records before introducing confidential work.

Check	Expected result
01	The complete approved Windows package starts correctly. Required local support is ready.
02	The three example cases produce the expected budget, register and memo results. Staff verify the evidence.
03	IT confirms that confidential sources, private questions and answers remain within the private workspace’s local processing boundary, including during network-observation tests.
04	Stop, clear and local export behave as agreed. The saved result appears only in the chosen approved folder.
05	The organisation approves the exact release, task scope, endpoint controls and user responsibilities.

Plan your pilot with Vigthoria

Bring a representative task and your data-policy requirements. Together, we can turn them into a clear workflow and a practical acceptance plan.
