Useful AI. Confidential work, processed locally.

Help your team review approved document and table extracts inside a private workspace on its own device. Start with one administrative task and a result people can check.

A clear workflow. A checkable result. Your data policy.

PRIVATE WORKSPACE · CLIENT DEVICE

- Selected source extracts
- Private questions and answers
- Calculations and human review
- Deliberate save to an approved folder

OPTIONAL ONLINE PLANNING

- General task selection
- Account and connection metadata
- Generic workflow returned
- No confidential source needed

These processing statements concern the demonstrated private workspace. Other connected services have separate data flows.

Review a budget

A fictional project totals €48,000 against a €45,000 review limit. Workbench identifies the €3,000 variance; the responsible colleague checks the source.

Find an incomplete entry

A fictional internal project register has one missing status. Workbench identifies the affected record and source row for follow-up.

Ask a project memo

Ask a focused question about the approved local text excerpt. Compare the answer with the source before using it.

30 minutes. One task. A practical pilot plan.

Bring a typical workflow and your data-handling requirements. We can begin with fictional records; confidential files are not needed for the first discussion.

Guided demonstration on an evaluation build. Installation and operational use follow agreed release, IT and data-protection approval.
